

POTENTIAL PROBLEMS OF INDUCTION COOKTOPS OVERHEATING THROUGH LACK OF VENTILATION.  
(Taken from real users on Online Forums.)

Maureen Valda Janjetich

I heard a bang when frying and now the plate doesn't work or the one above it

Leslie Naces Guzman

My problem on my induction stove is that it stays ON only in a few minutes and then it will blink. I tried all the preset buttons but same scenario happened. It will be ON and blink in a few minutes. I only encounter this lately. I have used my induction stove for 5 months already. What will I do with it so I can use it smoothly. I need your help. Thank you

Tanasiychuk Peter

We have had this Miele cooktop for a few years now, it's a 5 burner cooktop, we can turn the power on, when we set the temp to start heating everything works the number shows, it only stays on for a few seconds after we set the temp than it goes out, we tried every burner and different heating settings and they all do the same, none of the burners will heat up????

Hi only two plates is working on my Samsung glass hob stove what must I do for the other two to work

Laurie Imberi

Our GE profile induction cooktop is so slow...what do we check? It cooks eventually but boiling water takes at least 15 minutes.

Help!

Mark Bovey

Our induction cooktop was working beautifully for the first week. We bought new pans and were cooking a meal requiring the use of 3 of the 4 burners. Nearing the end of the cook, the elements shut off. We cleaned the surface and tried to resume. The areas tried to start, were heating up and after 3 or 4 seconds shut off again. I tried the hard reboot by flipping the breaker as suggested in multiple blogs. When we tried to start cooking again it did the same thing. Baffled.

My error code is E1, nothing works

Sandie Ross

Cook top keeps turning itself on and off but I can't turn it off or on myself

Pammie Eaton

Why won't my plates on my hob turn to lower heat even though I turn it to lower number

Larry Estep

My Elba induction cooktop comes on, but the heat number settings blink the top half of the number for a short time then shut down

Kim Stoltz

Cooktop suddenly has red light on 4 of the 5 elements and they do not respond as if they are locked. Control lock will turn on and off, had reset the power on it x 2. Once for about 20 seconds the second for about 10 min. The last element is working fine
